

Repowering - its time has come!

The Repowering InfoCentre

As a nationwide service provider for administrative districts and municipalities, the Repowering InfoCentre will provide you with information on the replacement of older wind turbines with new, high-output turbines in the municipal planning area.

The Repowering InfoCentre was founded by the Municipal Environmental Campaign U.A.N. (Kommunale Umwelt-AktioN U.A.N.) and is run in the cooperation with the German Association of Towns and Municipalities (Deutscher Städte- und Gemeindebund). The project is being funded by the German Federal Ministry for the Environment, Nature Conservation and Nuclear Safety for a total period of three years.

We...

- will provide you with information on all aspects related to the replacement of older wind turbines with new, high-output turbines.
- will highlight current legal and engineering developments.
- will put you in touch with a network of experts from the areas of politics, science and research.
- will give you the opportunity to exchange information and experience on a municipal level.
- will invite you to regional and national events.
-

We will support you in the implementation of your repowering projects!

How you benefit from repowering

- You can reduce your number of wind turbines and improve the appearance of the landscape.
- You can increase your trade tax revenue thanks to the higher yields produced by the new wind turbines.
- You can promote the acceptance of the harnessing of wind power by improving turbine characteristics with regard to lighting, emissions and grid integration.
- You can optimise the control of the spatial distribution of wind power activity in your planning area.
- You can support nature conservation matters by planning sites in a targeted manner.
- You can contribute to the development of an important domestic and export market in Germany.

Repowering thus represents an opportunity to improve the control of the spatial layout of wind power generation in your municipality, to switch your energy supply over to renewable energy sources in the long term, and to create jobs.

Our services

- Visit our website at www.repowering-kommunal.de to find out more about the general and state-specific framework conditions for repowering and the latest legal and engineering developments.
- We also organise regional events for you, where we can discuss and work together on your repowering projects.
- We would be happy to provide assistance and support for your specific repowering projects. We work together with regional partners and with you, the municipalities, as part of this service. In this way, you receive all-round information targeted to meet your specific needs. Our team of interdisciplinary experts is available to solve any problems that may arise.
